

HEALTH AND SAFETY PRECAUTIONS

GENERATOR SAFETY TIPS

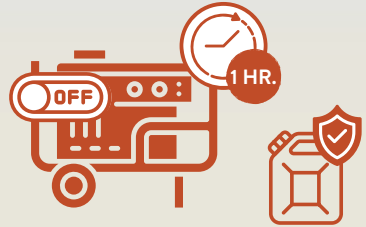

LOCATION

Place generator in a dry, well-ventilated area outside, at least 20 feet away from your home. Keep it away from walls, combustible materials, doors, windows, and vents.

REFUELING

Turn off the generator and let it cool down for at least an hour before refueling. Gasoline or other flammable liquids spilled on hot engine parts can ignite, including invisible vapors. Store fuel in an approved safety can, and use the type of fuel recommended in the generator's instructions or on the label.

VENTILATION

Ensure the generator has 3-4 feet of clear space above and on all sides for proper ventilation.

OTHER SAFETY TIPS

Read the manufacturer's instructions on how to use the generator. Use grounded cords, inspect cords for damage before use, and use the proper cord for the wattage being used. Also, keep the generator dry and do not use it in rain or wet conditions. Do not touch the generator with wet hands.
