

**APPLICANT'S ACKNOWLEDGEMENT OF  
SPECIAL INSPECTION REQUIREMENTS**

Permit No.: \_\_\_\_\_

Project Address: \_\_\_\_\_

Section 1704.4 of the California Building Code requires each contractor responsible for the construction of a main wind- or seismic force-resisting system, designated seismic system, or a wind- or seismic force-resisting component listed in the statement of special inspections (prepared by the registered design professional in responsible charge) to submit a statement of responsibility to the building official and the owner prior to the commencement of work on the system or component. It has been determined that special inspections are required for this project. The project owner or their agent (not the contractor) must hire the special inspector per CBC section 1704.2. Additionally, the special inspector(s) shall be approved by the building official per CBC 1704.2.1. A list of approved special inspectors is available on the Kern County BID website. A separate form, *Special Inspection Instructions*, is also available on the website.

The applicant indicates that the contractor(s) responsible for the above-mentioned construction are not known at the time of permit issuance. However, by signing below, the applicant acknowledges the statement of special inspections and the special inspection requirements contained therein. The applicant further agrees to inform the responsible contractor(s) of the required statements and their responsibility to submit those statements to the building official and owner prior to commencement of work on the system or component. Failure to submit those statements to the building official and owner prior to commencement of work may result in a stop-work notice issued and all work shall immediately cease until the contractor's statements are received.
