

Kern360 User Interface Update Highlights

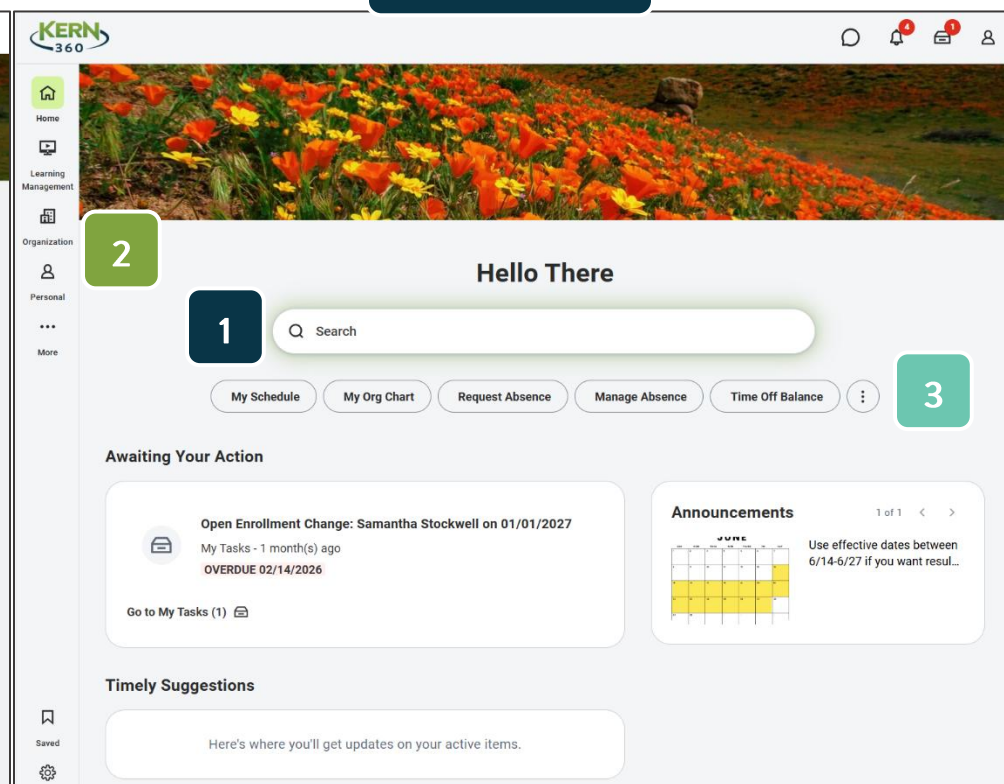

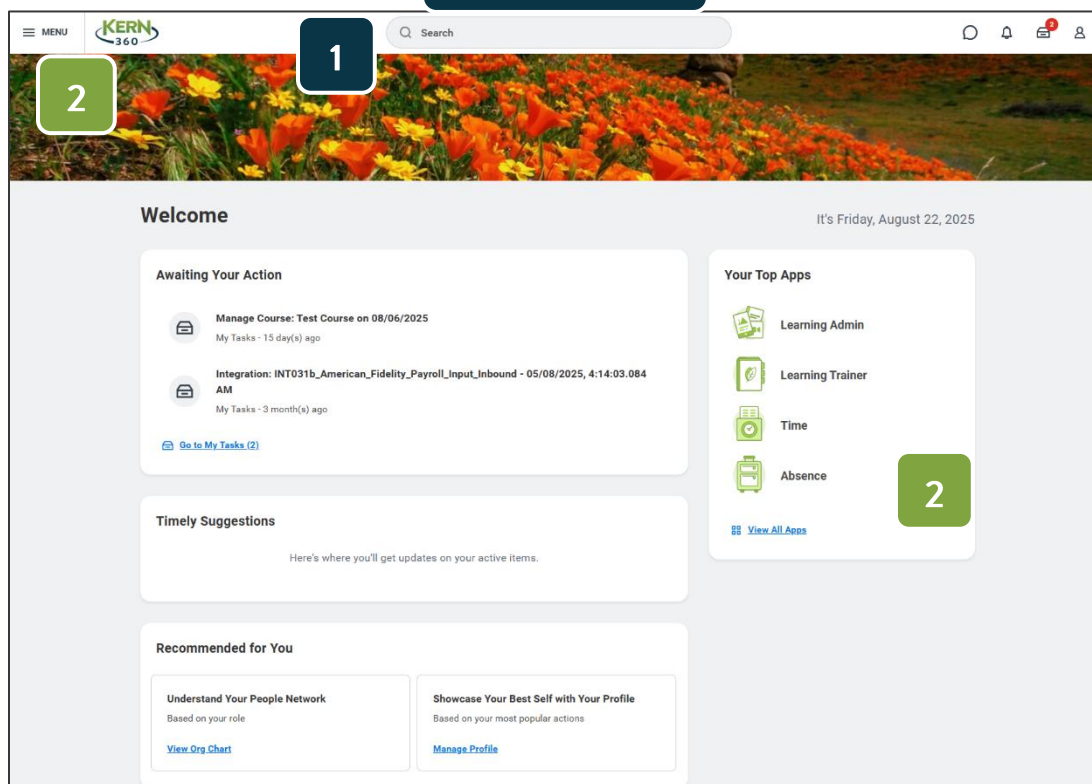

Kern360 is getting an updated user interface that includes an improved side menu, enhanced search functionality, and workflow-friendly homepage organization.

The images below show you a side-by-side view of the old and new homepages. A few notable changes include:

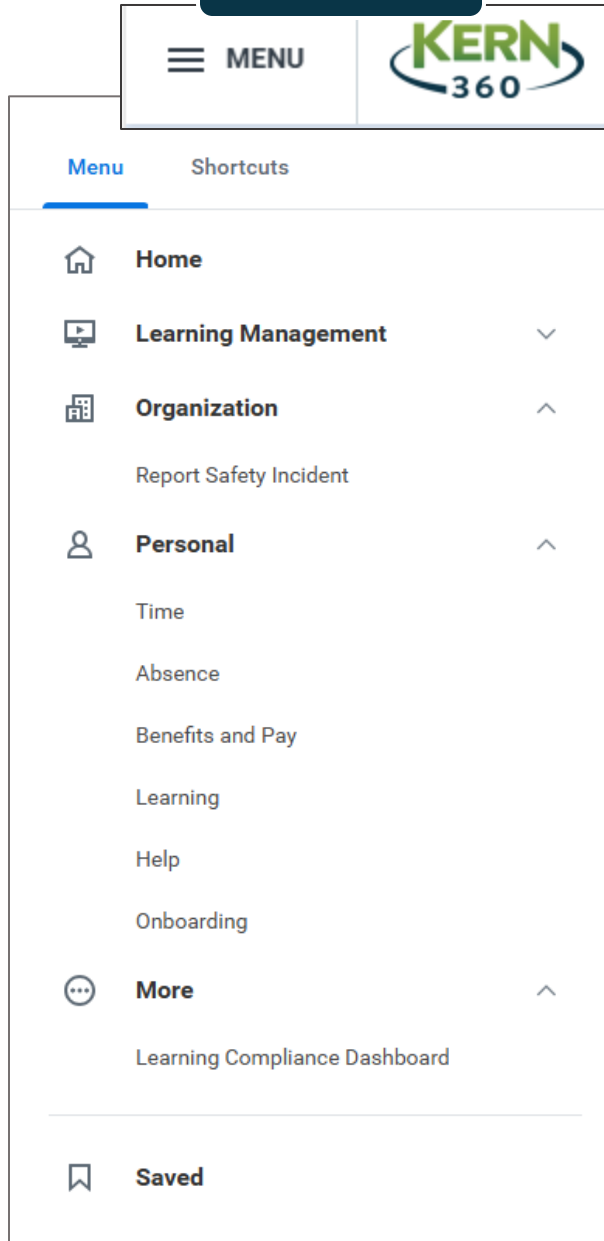

1. The new interface features your search bar front and center. Kern360's powerful search function is the quickest way to navigate the platform, and that feature gains more prominence in the new user interface.
2. Your dropdown main menu and apps are now streamlined into a customizable sidebar menu. See the next page for a closer view of the new menu.
3. You now have quick links below your search bar for easy access to your apps and features. Once HCM launches, your quick links will include items like requesting absences and your schedule.

ORIGINAL

The new menu allows you to access your favorite app categories from any screen. The old menu, featured left, was only visible when you hovered or clicked on the menu button. The new menu, shown right, displays your chosen app categories at all times. Hovering over any category opens up all options within that category. You can see the Personal section opened in the example image. You can also use the gear icon at the bottom of your new menu to add, remove, or move the options featured in your menu.
